Problem with holiday calendar in Google Calendar
Posted by JSimR - 2011/04/10 17:06

I have defined a holiday calendar in my account of Google Calendar.
Google Calendar shows this holiday calendar like an additional calendar in my account.
The problem is that Rainlendar doesn't import this holiday calendar.

So, do you get some error or what exactly happens?

No, it doesn't show any error.
I try to explain the problem better.
Google Calendar allows to add calendars to my calendar: birthdays, holidays, etc...
It shows in this form:
http://img861.imageshack.us/img861/2525/captura20110412195347.png

The first (in blue color) is my calendar. The second (in red color) is the holiday calendar.
Google shows the holiday calendar in my own calendar but its events aren't modifiable and it hasn't alarm.

Rainlendar2 doesn't show this events.

Have you entered the name of the calendar to Rainlendar's settings too?

Ok, that was the problem. I thought that Rainlendar2 imported both calendars.
