Rainlendar 2.0.1 build 30
Posted by Rainy - 2006/12/10 12:23

Build 30 can be downloaded from here:
Windows: Rainlendar-2.0.1.b30.zip
Linux: Rainlendar-2.0.1.b30.tar.bz2

This is beta version! It has not been tested.

The offline copy feature in the network calendars requires some additional testing still. I suggest that you make a backup of your events (also on the server) before you enable it from Options->Calendars.

You should also note that even if you are able to add and modify events while off-line it's not possible to delete the them without the network connection. Or well, you can delete an event but it will appear again when the connection is available and the event is read back from the online version.

The list of changes:

- 10 Dec 2006
o Alarm sound set for an event was not played. Fixed.
o Added "Keep offline copy" option to network calendar.
o Fixed a hang when a recurring task was set to completed.
o Pre and post days were shown always in the Dec-Jan. Fixed.
o The Private-checkbox didn't work. Fixed.
o Tooltips shouldn't pop up anymore if the menu is open.
o Improvements to the legacy skin support.

Still getting this bug with this build rainy:

This is a strange bug i'm getting with build 29.

If I manually type the time in when creating an event (or if I select 9.00pm but change it myself to 9.15pm) the time changes by itself from the afternoon to the morning. Because of this if I try to make an event starting at 9.00am until 2.15pm the end time is not displayed (because it's changed to 2.15am which would be before the start time).

Anyone else having this problem?

EDIT: I've just switched back to build 27 (I can't use 2.0.1 because of the cleartype issue) and the bug is not there.

I should mention this is for any time which I manually change (not just for quarter past the hour)

I need to rewrite the time format parser since the current one provided by the framework isn't doing very good job.

Thanks for the offline Network Calendar support, I will try to get some testing done this week for you.

Again Thanks Rainy :-)

Hi there Rainy,

Great Program Rainy and fantastic addition!!! Just wanting some clarification as to the Offline Network functionality.

Based on comments you have made regarding the deletion of events whilst the internet connection is down, I'm assuming that if events were added whilst the net was down these would need to be added in again after the net establishes itself again. Ie there is no syncronisation functionality. If this is correct, is there are plans to have some kind of sync functionality??

Regards

Stewart
P.s Great Program by the way....indispensable!!!

I have made some modifications to the Shadow4 skin. I noticed that the date of this skin is changed in every new build, but I don't think you made any changes to it. Is this right?
And if you made any changes to this skin, do you publish them in the changes.txt file?

---

sjmclean: The changes done in the offline file are automatically synced to the online version as soon as the connection is up again. The problem with the event deletion is that at the moment the deleted events are completely removed from the ics file. And when the online file is synced with the offline contents the program assumes that the deleted event is a new one and adds it back to the offline file.

Alf: The build script always repacks the skin even if there haven't been any modifications in it. I try to add at least all the major changes to the changes.txt but minor things might not be included (this also applies to the application itself). I suggest to make a copy of the skin if you change it so that it's not accidentally overwritten.

I did that already, but it is always possible you changed something to the skin to improve it (is that likely?), so then I'm not aware of that.

Thanks for the skin format!

I dont know if this is a b30 bug or not but I noticed after I updated to b30.
whenever you start the to-do list with "W", left part of W is caught off and it's not displaying full W.
I tried it with both shadow4 and rewind skin and it's just doing this for letter W.
anyother letter seems to be fine.. weird..

I did that already, but it is always possible you changed something to the skin to improve it (is that likely?), so then I'm not aware of that.
Alf, during the beta I always compared the unzipped skin to the old one to see if anything changed and/or to learn new tricks :)
