Deleted item is not deleted from Deafult.ics

Posted by Beat - 2013/06/18 06:09

I have migrated to Railendar Pro. The old events are stored in ..\.rainlendar2\default.ics. When I delete an event, it disappears from the screen, but after the next refresh, it reappears. I checked: in default.ics the event is not deleted. Manually editing defaulty.ics removes the event. Shouldn't the default.ics be adjusted automatically? Or do I do something wrong?

Are you deleting the event from the calendar or e.g. from the manager dialog (or does that make any difference)? You should get an error if Rainlendar is not able to delete the event from the ics file but I guess you are not getting any? Can you run Rainlendar in the debug mode and send the debug log to me? I can try check what exactly happens when the event is deleted. You can send the log to Rainlendar's support address but include a link to this forum thread so I know what it is about.

---

log file sent. (BTW: I accidentally overwrote the debug log file with the "normal" log file (not being aware of the fact, that rainlendar writes a log file in normal mode, too). Perhaps the debug log file could have a distinct name?
Thanks & regards
Beat
