## skin overflowing - how to stretch the background?

Posted by garbanzo - 2009/06/16 07:31

---

i'm trying to mod a skin to learn how things work so i can begin bulilding my own. i'm trying to make a sidebar skin with an event list below the calendar, all with the same background.

i want the background to grow as events are added, but it is staying the same size. what do i need to change to allow it to stretch to accommodate new events?

---

Try to define the background image's position so that the bottom right coordinate is relative to the bottom right corner of the window (origin2="BOTTOM-RIGHT"). See the "Item Positions" page on the Rainlendar's help file for more details.

excellent! that helped me out a lot, i've got it working fine now.

there are few things better than a developer who is active in his own software's forum. i really appreciate your time :cheer:
