Shadow4 Skin in German
Posted by MasterJM - 2006/12/11 17:33

Hi,

i used Rainlendar 0.2 for a long time.

today i deinstalled this old version and installed the
Rainlendar2 Lite Version with german language.

but this version does not come along with a german skin?
before i have a shadow skin (original skin) with german language - but i dont find it on this page.

so i search a german shadow4 skin - like the shadow3.1 from the old version.

have i overlook something?
thx :woohoo:

The multi-language Shadow4 skin is at the bottom of the language page:
http://www.rainlendar.net/cms/index.php?option=com_rny_localization&Itemid=34

NOTE If the skin uses bitmaps to draw the months and days, changing the language of the user interface does not affect the calendar on the desktop. To fully localize the application you can download the Shadow4.r2skin-addon which contains localized versions of the bitmaps for the default skin.

If you want more information, read this thread about problems with the Danish skin:
http://www.rainlendar.net/cms/index.php?option=com_joomlaboard&Itemid=27&func=view&id=1210&catid=5

That doesn't work on Linux (Ubuntu). Any idea?

2nd: "doesnt work on ubuntu"

error: "addon installation failed"

Linux needs dos2unix. Run this and try again:

sudo aptitude install tofrodos

My Linux (Ubuntu) solution: I merged the original Shadow4.r2skin with Shadow4.r2skin-addon to a new one containing english and german languages only. Not the perfect solution but works...

Download: http://www.rimmek.de/downloads/Shadow4_de.r2skin (500 kb)

stop RL
backup rainlendar2/skins/Shadow4.r2skin
rename downloaded file to Shadow4.r2skin
and copy/move file to RL skins folder
restart RL
change language in RL options

Hope it helps - at least for the german users :)

PS: if Rainy make changes to the default Shadow4.r2skin you have to create a new english/german skin yourself!

PS2: this applies to RL 2.0.2 (b32) default Shadow4.r2skin only! YMMV...

My Linux (Ubuntu) solution: I merged the original Shadow4.r2skin with Shadow4.r2skin-addon to a new one containing english and german languages only. Not the perfect solution but works...

I have updated Shadow4_de.r2skin to match changes done from 1.0 to 1.2 of Shadow4.r2skin by rainy. Tested with RL 2.3 (b54).

Download: http://www.rimmek.de/downloads/Shadow4_de.r2skin (530 kb)

Have fun :)

My Linux (Ubuntu) solution: I merged the original Shadow4.r2skin with Shadow4.r2skin-addon to a new one containing english and german languages only. Not the perfect solution but works...

Another update of Shadow4_de.r2skin to match changes done from 1.2 to 1.3 of Shadow4.r2skin by rainy. Tested with

RL 2.4 (b64). Also changed default today marker from circle to retangle.

Download: http://www.rimmek.de/downloads/Shadow4_de.r2skin (565 kb)

Have fun :)
