
new version installed, missing features

Posted by mgutt - 2006/10/30 06:52

Shortcuts I used in the past:

- make a new event (alt+s)
- make a new todo (alt+a)

Fontsize:

- changed in all windows like todo and events

advanced date:

- you use "Monday in 2 Weeks", but I want it like it is done in the old version "14.11.2006". Because I don't want to calculate the date everytime by myself or view in the calendar if it could be displayed directly.

How to do that in the new version?

regards

There are no hotkey scripts for the event and todo dialogs. I'll add them.

You can change the font size from Options->Advanced->FontScale.

You can change the header format from Options->Advanced->EventListHeaderFormat.

Wonderful. I've changed the font size to 150% and the date to:

%D.%m.%Y

It displays: 1.11.2006

But the hotkeys are important. Without the possibility to add dates from everywhere it is no benefit left for me.

regards,

Marc

EDIT:

Is it possible to change the order for to-do in the "old" way? Because now the last entered to-do is between all the others. And the selection of cat is to complicate. I only want a very simple to-do add thing as the old version had.

EDIT2:

The %D.%m.%Y thing won't work. It displays the wrong date (two days before):

Try changing the day and month both to lower case. %d.%m.%Y I did it and it works now.
