
How do i sync Rainlendar with google calendar?

Posted by Jazonion - 2009/06/22 13:07

I want to make it 2 way sync, that is, whatever changes i made on google calendar will appear on rainlendar, and whatever changes i made on rainlendar will also appear on google calendar. Is this possible? If yes, how can i do it? Do i have to get the pro version of rainlendar inorder to achieve this?

I searched the forum for similar topics, but i didnt find anything helpful. Maybe i didnt do it right? Any help will be appreciated.Thx~

It works by default that way. The events created in Rainlendar to the Google Calendar also appear there and all changes done in Google Calendar will appear in Rainlendar once they are read back from the Google's server. And yes, you need the Pro version for this.

Dear Rainy

I did exactly as what you said. But the result I got is not as expected. I made changes on one of the events in Rainlendar (at my end). But the changes is not reflected on Google Calendar. Please help.

Check that you are editing an event that actually is stored to your Google Calendar. If you edit a locally stored event the changes won't appear in anywhere else. You can see the calendar where the event is stored from the bottom left corner in the event editor.
