Is it normal that Rainlendar version 2.0.1 is much slower than former versions?
On my computer version 2.0.1 reacts very slowly on whatever command it receives. This was not in my older version.

Wow, I came to this forum to post about this exact same thing. I can't believe how long it takes to "Dismiss" the alarm, for one thing and of course, when I am doing other things, I don't like it hanging there!!! I want it gone, NOW! Hope we get an answer to this problem really quickly avanacker/Adhemar

Disable Cleartype or get build 29.

How do I disable cleartype? I won't get build29 until it is out of beta stage.

Control Panel->Display->Appearance->Effect

Indeed, I get normal speed by disabling Cleartype.

Thanks
Adhemar

I installed the beta build 29, which is something I have never done for any software (installed beta, that is) and I am happy with the new build.
