
Delete \"no selcted calendar\" causes crash

Posted by therat - 2006/12/01 14:41

Hi,

I tried to delete the default calendar, to create and test the "network shared calendar".
(Options.. -> calendars)

Unfortunately I didn't selected a calendar from the list. I clicked the "remove" button and Rainlendar crashed. I tried it on two XP-Systems and again with 2 calendars in the list.

Stefan

Will be fixed in the next build.
