
Rainlendar2 hang up at Job-Window?

Posted by tomse - 2006/12/01 14:48

I hope, my english is good enough to explain what I mean.
Following Problem:

Yesterday Rainlendar show (I used this function for the first time) a pop-up-Window whit a job for the day.

At first, I pushed the Button "Snooze" - after some times, the window comes back.

At next, I pushed the button "Disssmiss" - nothing happens.

I want to open an other Program - but al thing were very slow.

I looked at Rainmeter:

rainmeter shows me CPU-Power 100% and the most activ Program was Rainlendar. Rainlendar "hang up", I was not able to close Rainlendar in the right way - only with Strg-Alt-Del.

(Task-Manager)

Is this a bug or what?

PC:

AMD Athlon 3500+

1 GB Ram

upgrade your version of rainlendar ...

the last one is : 2.0.1 (b28)
