Different font colors
Posted by movezerb - 2011/08/21 03:47

Hello

I'm totally new at scripting and I must admit I don't really understand everything...
I'd like to have different colors to apply to dates, according to which sort of event happens on the day. For example: 21 is a party event > goes red, 25 is a business event > goes blue, etc...
I found how to make it with bitmap but I want to make it only with fonts. Is it possible?
I created different profiles but the EventFontColor seems to override profiles' colors...
So what should I do?

(I hope it's clear enough, English is not my mother language)

Welcome to the forum, movezerb.

You post this question on "Scripting" (but it would be better in "Skinning").
Are you using the .r2skin format (xml) or the old .ini format?
which version or Rainlendar?

Oh ! Sorry for that ^^'
It's the old .ini format, I don't even know how to code a .r2skin ^^'
In fact, it's a skin I found and I tried to modify it to make just as I want.
Rainlendar version is latest 2.9.

I started using Rainlendar with the version 2.x.
I can't help you skinning the old .ini format, even I don't know if what you want is possible with the .ini format.
Hope that someone else can help you.

Is it possible to convert old skin format to new? And how to code a new format skin?
I tried - just to see - to open a new format skin in a text editor and it doesn't work... How am I suppose to edit it?

Is it possible to convert old skin format to new?See:
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=9&id=13427

And how to code a new format skin?Do: Right-click on calendar window -> click 'Help' and see 'Skinning Tutorial'

I tried - just to see - to open a new format skin in a text editor and it doesn't work... How am I suppose to edit it?Rainlendar2 skin (.r2skin) is just a normal zip archive with different file extension so you can uncompress it after renaming the extension back to .zip

I want to make it only with fonts. Is it possible? I created different profiles but the EventFontColor seems to override profiles' colors... So what should I do?a) It's possible.
b) If the date that has event is use Bitmap to appear, only change the EventFontColor will not affect the appearance.
At session, you must to change EventRasterizer=FONT to use Font to appear.

Thank you for the complete response.
I still have a concern anyway. You say I have to set EventRasterizer=FONT.
That's what I did, but then I set the EventFontColor=0000ff for example.
Then all my event days are blue. What if I want some in blue and some other in green?

You can use Profile to change what you want.
example:
Set one event as "Work" and at session add following:

==========

Re:Different font colors

That's exactly what I did, and that's my problem...
EventFontColor seems to override profile colors.

Here is my "Event" settings:

EventEnable=1
EventBitmapName=
EventlistBitmapName=
EventAlign=18
EventNumOfComponents=
EventSeparation=0
EventRasterizer=FONT
EventFont=12/0/0/0/700/0/0/0/0/3/2/1/34/Calibri
EventFontColor=0000ff
EventInCalendar=0
EventFont2=11/0/0/0/700/0/0/0/0/3/2/1/34/Calibri
EventFontColor2=0000ff
EventIconEnable=1

And here is my "Profile 1" settings:

Name=Business

EventFontColor=ff0000

According to this normal events should be blue and Business events should be red. Instead, they're all blue :s
(Of course I chose for my event in the calendar the "Business" category so I have a right idea of what happens)

Here is my .ini file so it will be easier... Maybe the error is elsewhere...

I copy your code to test, it's working well.

But, you have some thing wrong:
the color code is use: color=XX(blue)XX(green)XX(red)
So, according to your code normal events will be red and Business events will be blue.
Suggest you set more other date to test.

I have not change your code, so you can see(image):
25 is Business event and 30 is default event.

Re:Different font colors

Posted by movezerb - 2011/08/21 13:57

Well I'm really confused...
I tried creating 7 different profiles and event days always appear in red >_<
Don't get what's wrong.

I added the zip file with all files the skin uses... Maybe something in another file is wrong?
http://www.rainlendar.net/cms/images/fbfiles/files/Harmony_m1.zip

Or maybe is there an option, a box to check in Rainlendar options??
I'm really lost now :(

Sorry, i forgot you are using version 2.9
I has been using old version to test.
I think the new version is not support Profile set, so you always get the default event color.
So, you might need to convert ini file to xml file, or back to using old version.
