## Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/12 08:06

---

Build 80 can be downloaded from here:

Windows: Rainlendar-2.5.b80.zip

Linux TAR (32-bit): Rainlendar-2.5.b80-i386.tar.bz2

Linux DEB (32-bit): rainlendar2-pro\_2.5.b80-1\_i386.deb

Linux TAR (64-bit): Rainlendar-2.5.b80-amd64.tar.bz2

Linux DEB (64-bit): rainlendar2-pro\_2.5.b80-1\_amd64.deb

Mac OS X (Intel): Rainlendar-2.5.b80.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.5:

<http://www.rainlendar.net/download/1.5/Shadow4-Widgets.r2skin-addon>

<http://www.rainlendar.net/download/1.5/Shadow4-Languages.r2skin-addon>

Changes:

- o It's now possible to use math expressions in the xml format skins in attributes which have integers as the type.
- o Added possibility to define width for each character in a bitmap font. The bitmap font can be used most places as normal fonts.
- o Increased the Rainlendar\_ShowMenu() index range to 10000. It can now also contain submenus.
- o Added a copygroup item for the xml skins which duplicates the items it contains. The position of the items can change in each copy.
- o Added possibility to rotate the bitmap elements as they are loaded.
- o New calendar windows for Shadow4: Grid Calendar, Vertical Line Calendar and Horizontal Line Calendar.
- o The tooltip shouldn't open anymore over other applications.
- o Recurring Outlook appointments with multiple exceptions were not always shown correctly. Fixed.
- o The Rainlendar's data stored as a Remember The Milk's notes was sometimes multiplied. Fixed.
- o Added showmonth attribute for the time element. <http://www.rainlendar.net/cms/images/fbfiles/files/BitmapFontTest.zip>

The Outlook plugin does not seem to work for me. I can not define an Outlook calendar. It does not allow me to select an Outlook profile or which Outlook database to use.

---

## Re:Rainlendar 2.5 build 80

Posted by Grrr - 2009/07/12 19:34

---

I updated to build 80 and my tooltips stopped working and somehow all my summary titles were blank. Fortunately I have a mirror copy on my other notebook and I restored back to build 79 for now.

---

## Re:Rainlendar 2.5 build 80

Posted by codesoho - 2009/07/12 23:36

---

Confirming the same prob with GCal and RTM. The summary is blank, therefore no items in events/todo list.

---

## Re:Rainlendar 2.5 build 80

Posted by garbanzo - 2009/07/13 07:11

---

- o Added possibility to define width for each character in a bitmap font. The bitmap font can be used most places as

---

normal fonts.

awesome, thanks so much for this new feature! i'll test it later today and post my results.

where can bitmap fonts not be used?

=====

### Re:Rainlendar 2.5 build 80

Posted by garbanzo - 2009/07/13 10:21

---

i'm not having any luck using bitmap fonts in the events list. i have it defined exactly like my numbers font, but i just get jibberish.

what is the new syntax? how do we define the width for each character?

=====

### Re:Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/13 14:52

---

There seem to have been some problem with the compilation of the Windows version. I recompiled and updated the package. Please try it again. If you have the offline file enabled you need to disable it first, refresh the calendar and enable it again.

Ranger Bob, please attach the Rainlendar's debug log and tell what version of Outlook you are using.

garbanzo, the syntax for the alphabet is "=;=;=;..." (i.e "A=10;B=6;C=8;"). Special letters like ';' which would mess up the format need to be defined as unicode (e.g. "U+3B"). The bitmap font image will be automatically divided into as many parts as there are letters in the alphabet and the characters must be equally spaced in the image. That means that if for example the width (or height) is 300px and you have 30 letters in the alphabet each character will take 10px in the image no matter what you define as its width in the alphabet attribute.

=====

Posted by Grrr - 2009/07/13 15:08

---

I downloaded and installed the latest revision of build 80 for Windows and all is well.

Thank you, Rainy for the quick fix.

This beta still is not remembering the setting "suppress errors" (in german) for a shared network calendar in the sectoin "shared network calendar".

Why is this option available in both "general" and "shared network calendar"?

And in what unit do you enter the time-delay? Is it seconds? This should be documented somewhere. I was not able to find it in the help. May be add (translateable) tooltips?

I sent you the link to the ics via PM.  
Thank you!

--

Moreover I saw that the bug concerning a dualscreen setup is also not fixed, where the tooltips' position is calculated wrongly (see attached picture) if the resolution is not identical and the two screens are aligned as seen in the screenshot.  
<http://img269.imageshack.us/img269/9978/rainlendar.th.png>

--

Setting a category for multiple entries does not work. Moreover there the categories are not translated. That is may be the reason, why it does not work.

Why is this option available in both "general" and "shared network calendar"?

The item under General is "Suppress alarms" which is a different thing than suppressing errors. Does the problem happen only with German translation or are you able to reproduce it also with English?

And in what unit do you enter the time-delay? Is it seconds? This should be documented somewhere. I was not able to find it in the help. May be add (translateable) tooltips?

If you mean the poll frequency the help file mentions that the value is in minutes. But yes, it would be a good idea to show it in the item's name too.

Moreover I saw that the bug concerning a dualscreen setup is also not fixed, where the tooltips' position is calculated wrongly (see attached picture) if the resolution is not identical and the two screens are aligned as seen in the screenshot.

The fix actually applied only to Mac and Linux versions. But I'll take a look at it again. Is the calendar's position set as "On Desktop" or to something else?

Setting a category for multiple entries does not work. Moreover there the categories are not translated. That is may be the reason, why it does not work.

Yes, the categories are not translated in the dialog but that shouldn't matter. I tried it with the Finnish translation and it seemed to work ok. Are the events you are trying to modify normal local Rainlendar's events (that is they are not e.g. from a read-only calendar)?

=====

---

garbanzo wrote:  
that didn't work. let's try this...

<http://imgkk.com/i/64sUr3ck.png>

The font image looks ok so I'm not really sure why it is drawn like this. If I use the image in the BitmapFontTest skin it looks like this:

[http://www.rainlendar.net/cms/images/fbfiles/images/Picture\\_1-ffaedfaf9ff5ffb5920ede8f54b6c3ec.png](http://www.rainlendar.net/cms/images/fbfiles/images/Picture_1-ffaedfaf9ff5ffb5920ede8f54b6c3ec.png)

Are you using Windows or some other OS (it shouldn't matter though since the code is the same)?

=====

## Re:Rainlendar 2.5 build 80

Posted by garbanzo - 2009/07/14 12:59

---

i solved the problem! it was my fault, my code was messy and i was trying to draw the text over a non-existent background image :blush:

i do have another question though - is there a way to reduce the amount of space it puts between words? it's entirely too big...

<http://i25.tinypic.com/2j4sq33.jpg>

=====

## Re:Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/14 13:16

---

Yes. Just define the space as one of the characters and give some width for it in the alphabet.

=====

## Re:Rainlendar 2.5 build 80

Posted by garbanzo - 2009/07/14 13:18

---

excellent. thanks so much for your help! this app just keeps getting better and better :D

now you just need to fix the "preview" function on the forum :woohoo:

=====

## Re:Rainlendar 2.5 build 80

Posted by codesoho - 2009/07/18 07:54

---

RTM doesn't seem to work in offline mode, todo list/manager is empty.  
Keep offline copy is enabled and I can see the rtm .ics files in the backups folder. I opened one of them as a regular iCalendar format and everything seems to be there.

Win XP SP3. No problem with GCal btw.

=====

## Re:Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/19 05:14

---

So, if you disable the offline copy the tasks are shown correctly? Is the manager empty as in it doesn't contain any items or just that the texts for the items are missing?

---

## Re:Rainlendar 2.5 build 80

Posted by codesoho - 2009/07/19 09:09

---

By offline mode I mean when there is no Internet connection available. At the same condition GCal seems to work great. I can see the RTM tasks only when online.

The Manager is empty (no items at all) when disconnected. The .ics (both GCal & RTM) are inside the backups folder, somehow rainlendar doesn't seem to pick up RTM.

---

## Re:Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/19 11:45

---

And you have the "Keep Offline Copy" enabled for the RTM calendar? If yes, please send the Rainlendar's debug log to me (rainy@iki.fi).

---

Setting a category for multiple entries does not work. Moreover there the categories are not translated. That is may be the reason, why it does not work.

Yes, the categories are not translated in the dialog but that shouldn't matter. I tried it with the Finnish translation and it seemed to work ok. Are the events you are trying to modify normal local Rainlendar's events (that is they are not e.g. from a read-only calendar)?

---

1. The string for "Suppress alarm" is translated wrongly in German. In the english version it is fine.

2. With the english language enabled the option for "Suppress errors" is remembered (the calendar is set to read only). Strangely after I am able to switch back to german even though I deleted the languagefile from the programdirectory. And even stranger is that now the setting for "suppress errors" is remembered. What is going on? May be Rainlendar found another language-file somewhere else?

3.  
Moreover I saw that the bug concerning a dualscreen setup is also not fixed, where the tooltips' position is calculated wrongly (see attached picture) if the resolution is not identical and the two screens are aligned as seen in the screenshot.

The fix actually applied only to Mac and Linux versions. But I'll take a look at it again. Is the calendar's position set as "On Desktop" or to something else?

Still not fixed in Beta 81.

4. Setting a category for multiple entries does not work. Moreover there the categories are not translated. That is may be the reason, why it does not work.

Yes, the categories are not translated in the dialog but that shouldn't matter. I tried it with the Finnish translation and it seemed to work ok. Are the events you are trying to modify normal local Rainlendar's events (that is they are not e.g. from a read-only calendar)?

I could not reproduce it with Beta 80, but it seems to work fine in Beta 81 and the strings are even translated now.

Sorry for the possibly confusing answers..

=====

## Re:Rainlendar 2.5 build 80

Posted by Rainy - 2009/07/28 14:34

---

I changed the "Suppress Alarms" text in the German translations so it should work now.

I'm not able to reproduce the problem with the tooltip on my Mac and since I don't have a Windows setup with multiple monitors this needs to wait until I can find one where I can debug the problem.

=====

## Re:Rainlendar 2.5 build 80

Posted by Chaser - 2009/07/28 17:57

---

I of course also would gladly test a debug edition, if it helps. May be you could at a debug-information that puts the position of the cursor and the position of the tooltip to the log-file.

May be something like this goes wrong:

Cursor-position is x (vertically)

Monitoroffset is 100

Instead of calculating x-100 it calculates x+100 (or the other way round). Could that be?

=====
