\"pop up\" window when I have active sync google cal
Posted by mommek - 2011/11/03 05:35

Hi,

I have activated sync rainlednar with google calendar, and now rainlendar have "popup" box with events.
This popup window is quite big, with sound effect and only what I can do is hide him for 2 hours.

It's possible to disable this popup? I can't find any options in manager :-(

You can disable the alarm for the calendar in the settings if you don't need it. Go to Options->Calendars, select the calendar from the list and enable the "Ignore alarms" setting.

Hi. I have this problem with Google calendar. A lot of events for tens of weeks ago are showed and the screen goes out of my monitor screen limits...
I wouldn't like to disable the alarm. I'd like to limit it up to, e.g., 1 week ago or yesterday...
Is it possible?
Thanks.

Rainlendar Pro V 2.9 (b111)

Hi.

If I download my calendar from Google and use the .ics file instead of connect direct to Google, I don't have the "lot of events window" problem. And, of course, I'll have exactly the same events... Is it a Google sync bug?

Thanks.

The alarms are handled differently when they are read directly from Google and when they are read from ics file. If the alarm window contains more events that fit in the screen you can move the alarm window with mouse until you see the dismiss button. Dismissing a lot of events at once can take a while but you shouldn't see the alarms anymore after that

(except when the next alarm will trigger).

That's all right now.
I'm happy again... :laugh:

Thanks, Rainy.
