Can\'t click on the top menu??
Posted by LucyB - 2011/11/24 23:32

I am using rainlendar on a macbook pro, mac OSX 10.7.2 and it has been working fine for 2 months but now I cannot click on the top bar menu (Where it says file, view, window etc), as in none of the menus drop down... Even the apple menu doesn't drop down unless I click out of rainlendar on the desktop or finder and then click on the apple. How can I fix this? I have tried deleting the program, redownloading and reinstalling but that doesn't work :(
Thanks

I received a similar error report a while ago but I'm not able to reproduce the problem. I wonder if it was caused by some software update. I'll update my Lion and see if I get the problem too.

I am having this problem, too. I am running Mac OS version 10.7.2. It is preventing me from using Rainlendar on my MacBook Pro. I don't want to re-enter all the calendar events that I previously entered on my PC. However, without the File menu, I cannot import the calendar I built on my PC.

You can access the menu also if you click the right mouse button over the window.

Thanks! I missed the spot for importing a calendar under "Options," partly because the format of the options in the Mac version is different from the PC version.

I found the import option (labeled "Add" in the Calendar Options section) after you mentioned clicking the right mouse button.
