Visualise how many To-Do(s) at the same time

Posted by marcelo.betel - 2011/12/30 15:08

Hi there?

I'm not sure if it's possible already...

I would like to be able to see how many calls I have scheduled for that day with some dots showing me how many they are by the time (hour, min).
I mean, some way to know if I had as many calls to do that it's impossible to do it, you know?

That would be a really cool way to control the schedulling moment of the next call for that person/client. If they say he/she will be there after 11am, then I could see if I choose to put the alarm to 11:30am or later before 12:00h.

It would be really cool!

If there's a way to do that, please, tell me, ok?

Thanx a lot!!!

I'm not sure I fully understand what you mean but you could sort the to do list by the due date so that the list will group the tasks for each day. You could also try to use events instead tasks (or enable the "Show tasks in calendar option" and enable the day or week view for the skin which will give you better overview of the schedule.

Hi, Rainy,

Thank you, but that's not exactly what I am talking about.
What I want t see is all those TODO stuff that I schedulled in a day (like you said) but in a manner that I can see by the time division that Rainlendar use by dafault (ex.: 9:00, 9:30, 10:00, 10:30, 11:00, 11:30...) so I could visualize how many phone call I have to do in each half hour to keep my TODO list on track, you know?
