# Google calendar with multiple calendar
Posted by Phil - 2012/01/04 17:20

---

Hello,

I have got the pro version of rainlendar and I can synchronize with my google calendar but only my main calendar is downloaded. How can I get my other calendar on the same account?

Thanks

You have to add another calendar, and in the dropdown box select the one you want to use.

http://www.rainlendar.net/cms/images/fbfiles/images/select.png

Thank you very much for your answer,

Now, I've got all my calendar, in fact if somebody want to do this, I have to create in rainlendar as many calendar as sub-calendar in google.

Hey Hey,
i managed to create several calender from my Google Account, but still only my main calender shows up.

Here are my settings, did i install something wrong?

Hi. I noticed that the "Feiertage - Kalender" is not showing up anymore. :S
Maybe Google changed some format settings.
Also most of the other google calenders except the "main" are not working right now.
So i think youre setup is ok, but something is wrong with the protocol, imho.

The problem seems to be on the Google's side. The query for the events goes through successfully and Rainlendar gets the calendar's information but the result contains no events. This seems to affect only the public calendars (e.g. holiday calendars and such).

I noticed that too, created a new calendar and imported a ics file with public holidays.

Found one ics at icalworld

Thats true, i have the same problem here to.
Not showing the official public holidays for Austria.
Think we have to use the ICS-Workaround.

Any new information about that problem?
