
Rainlendar 2.5 build 81

Posted by Rainy - 2009/07/24 05:43

Build 81 can be downloaded from here:

Windows: Rainlendar-2.5.b81.zip

Linux TAR (32-bit): Rainlendar-2.5.b81-i386.tar.bz2

Linux DEB (32-bit): rainlendar2-pro_2.5.b81-1_i386.deb

Linux TAR (64-bit): Rainlendar-2.5.b81-amd64.tar.bz2

Linux DEB (64-bit): rainlendar2-pro_2.5.b81-1_amd64.deb

Mac OS X (Intel): Rainlendar-2.5.b81.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.5:

<http://www.rainlendar.net/download/1.5/Shadow4-Widgets.r2skin-addon>

<http://www.rainlendar.net/download/1.5/Shadow4-Languages.r2skin-addon>

Changes:

- o Added support for RECURRENCE-ID property. The exceptions are now visible but it's not possible to edit such events.
- o When creating a new task by right clicking over the to do list the current header (category, due time, ...) is set automatically for the new task.
- o Categories are not translated automatically to English when saved to the calendar (unless you enable the "Store English category names" from the advanced settings).
- o Deleting the last item from an online calendar works now but only if it's the only one being deleted. If you want to clear a calendar disable the offline copy first.
- o The offline copy didn't work with RTM calendar if the network wasn't available on startup. Fixed.
- o Added advanced option to play the alarm sound in loop.
- o Added Rainlendar_PlaySound and Rainlendar_StopSound to the Lua API.
- o It's now possible to limit the number of days the to do list shows (defined in advanced options).
- o The alarm list's menu includes now the status selection for the tasks.

The string "Poll frequency (mins)" seems to be non translateable. Apart from that I also replied in the thread concerning build 80.

Rainlendar V. 2.5 b80 didn't tell me there was a new version available. And yes, it's set to look for beta-updates in advanced. :huh:

I'm not able to change the width of "events list" and "todo list" for some reason. I made the change but everything is still the same.

I'm using the OSX version.

If you open the settings window again is the width changed back to the original value? What skin are you using?

May be this has also to do with a localization?

Greetings,

I have encountered a problem with this build. I am using Outlook plugin and all the tasks I have marked as 'Finished' are shown in the todo list. The option 'Hide finished tasks' is activated. I have the Czech localization, so the labels may be different in english menu. However I hope you fully understand the situation.

Thank you for reply,

Martin

P.S. I tried to mark the tasks as Finished also in Rainlendar but after refresh (or Outlook sync???) they were back on the list.

The status field for the Outlook events had got broken. Will be fixed in the next build.

Yeah, it doesn't do anything, only goes back to the original value. I'm just using the regular shadow4 skin.

Ok, I figured out that after you put the value into the width box, you have to click somewhere else for it to save that width value, then press the OK button.

This bug http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=7942#7962 seems to have returned to some degree. Events seem to group under the same day, yet there are multiple entries for the same event.

=====

Re:Rainlendar 2.5 build 81

Can you attach an example event?

=====

Re:Rainlendar 2.5 build 81

Posted by Erulisse - 2009/08/06 11:39

Sure thing The event is on a public calendar I've attached an image of what I get. Note the single event always shows up as two even though i have messed with the event grouping settings.

Here's the link to the calendar!

Found the problem. The grouping doesn't work correctly for recurring events which have a start time. I'll fix it in the next build.

This is great news. My network calendar on Zimbra now show up correctly. Thank you!!

It's great the meeting exceptions are showing up correctly, but the reminders for the exceptions seem to be a little unpredictable. I don't remember seeing the reminder for those meetings at all (but I am not 100% sure, will keep my eye out for next exceptions). then on my system at home, I can't clear the reminder for one of the exception at all (after the meeting was already passed for almost 5 hours). keep coming back after I dismiss it or reload the calendar. I can work around it by turning the reminder off on the server then reload the calendar again.

Re:Rainlendar 2.5 build 81

Posted by Rainy - 2009/08/21 11:37

The alarms actually shouldn't be shown at all for these events as they are read-only so you cannot dismiss the alarm. I'll need to fix that.
