
Alarm - Crazy Problem

Posted by Barbara92021 - 2006/12/02 16:36

When the alarm dialog box pops up on my screen, the browser window I am in, goes crazy! Any words, dates, etc on the browser start wiggling really fast. At first I thot my browser was at fault but then realized it only happens when the alarm box pops up and as I said, in avanacker's speed thread, I want to know why the alarm box hangs - after I click Dismiss it takes forever for it to go and when it does, the wiggling in my browser stops.
