[Solved] About \"Show SubMenu\"
Posted by anoob - 2012/08/19 13:36

I want to create a menu containing sub-menu, and the Help-file wrote:
If the table value is a table too ("{SubMenuName={Item1, Item2, Item3}}}") a sub menu is created from it.
But, the "SubMenuName" can not be chinese-characters.
Please help me solve it or told me how can I do? thanks.

I think it's because SubMenuName is in fact a variable, and you cannot use chinese characters for variable's names.

As it works now, I think it's the same as doing:
SubMenuName = {Item1, Item2, Item3}
Menu = {Item1, Item2, {SubMenuName}, Item3}

And if this is right, there's no way to change by user code.

Thanks, it seems so.

It's actually not a variable but a key in the table. The lua's short syntax for keys just doesn't allow foreign letters when defined this way but you can try to do it like this:

menu = { "green", "orange", {={"yellow", "blue", "red"}}}

While debugging this I noticed that the submenu needs to be wrapped inside another table which is unnecessary. I'll change this in the next build so you'll need to remove the middle { and } chars or you'll get an extra submenu.

Edit: Ok, it seem I can't enter foreign characters here either but those encoded numeric values are supposed to be chinese.

If set:
table={{={'1','2','3'}},{={'4','5','6'}},{={'7','8','9'}}},

on b122, it can be displayed the format I want (1),
but on b123, it is more than a layer of sub-menu (2).

And, if change set as:
table={={'1','2','3'},={'4','5','6'},={'7','8','9'}},
it will occur error of sort (3).

How can I do? Please help.

Ok, I'll try to check why the menu items don't go in correct order.
