
Problem with gCal daily events termination

Posted by Gideon007 - 2006/12/02 16:50

I've got a problem with a daily event. It was supposed to run for only two days and Google Calendar shows it correctly (from December 1st to 2nd). Rainlendar2 runs it 'till the third. This is reproducible, at least with a two days event. See the attached picture. http://www.rainlendar.net/cms/components/com_joomlaboard/uploaded/images/rainbug.jpg

edit: also the manager shows only the first time of a daily event and not when (or if) it ends.

Google seems to use some random time with the until date which creates the problem with Rainlendar. I'll fix that.
