[SOLVED] Install Rainlendar2 on Fedora 17
Posted by jnizama - 2012/09/30 02:17

Download railander2 (.tar.bz2)
Uncompress on /home/myuser

Create simbolic links to librarys (on 64bits replace lib with lib64)
sudo ln -s /usr/lib/libssl.so.10 /usr/lib/libssl.so.1.0.0
sudo ln -s /usr/lib/libcrypto.so.10 /usr/lib/libcrypto.so.1.0.0

Execute rainlendar2 (doble click en dolphin)

Enjoy!!!

Hi,

I have just installed Rainlendar2 on my Fedora 16 (unpacking Rainlendar-Pro-2.10-i386.tar.bz2 to /opt folder).

After entering ./rainlendar2 in terminal every time I get the following messages:

./rainlendar2: /usr/lib/liblber-2.4.so.2: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib/libcrypto.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib/libssl.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib/libssl.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib/libldap_r-2.4.so.2: no version information available (required by ./rainlendar2)

In the same time I get message window with the title: 'Warning .:. Rainlendar2', and the following message:

Invalid plugins found!
The following files in Rainlendar's plugins folder are invalid and should be removed:

/opt/rainlendar2/plugins/NetworkPlugin.so
/opt/rainlendar2/plugins/ToodledoPlugin.so
/opt/rainlendar2/plugins/RTMPlugin.so
/opt/rainlendar2/plugins/GooglePlugin.so

http://www.rainlendar.net/cms/images/fbfiles/images/Screenshot___11272012___12_11_36_AM.png

which repeats every time I refresh Rainlendar2 (using Refresh command in context menu). See the attached dialog screenshot .

Could you help, please?
Thanks in advance!

You might be still missing some dependencies so the libraries cannot be read. Check if Rainlendar's debug log contains any errors.

Thanks a lot for quick reply!

I will check dependencies again. If I find solution I will publish it here.
