v2.11 crash on creating an event

Posted by observer - 2013/01/20 10:16

Generally, the version appears to be not very stable on my system (OSX 10.6.8).
Sometimes it takes quite long to load windows, and it always loads the event and task dialog behind all other program windows.

Now it crashed while I was setting the date details for a new event. Crash log was:

_____

There is no Rainlendar's code in the callstack so the problem is probably somewhere in the framework library (the Mac version support is quite lacking in it).
