Todo list question

Posted by roy.mengelers - 2013/01/27 02:40

Hello,

I am using Rainlander 2.11 Pro and it is has my google calander synced.

I have the following problem:
I am using Todoist as my todolist tool.
I have my Todoist synced with my google calendar under other calendars

Now I can't seem to find a way to link the other calendars todolist with Rainlander.

Are there any suggestions?

The other thing I have tried is to add the todolist trough the ICalendar feed but this seems to only support local files. I only get the url from Todoist, so maybe there is another solution to get this solved?

I hope someone can help me out.

Thanks in advanced!

The free version of Todoist doesn't seem to support the ics feeds so I could not try it myself but you should be able to read the tasks into Rainlendar Pro if you create a Network Shared Calendar and give the url for it. Note that Todoist will most likely not allow you to make any changes to the downloaded ics file so the tasks (or events depending how the feed is made) will be read-only.

Thanks for the quick response!

I will try to add it to the Network Shared Agenda.
