# Changing how manager view looks?
Posted by v12cat - 2013/04/03 07:05

---

Is there any way I can change how manager view is displayed. In the Linux version, date and time are barely readable. A simpler view, like the one in your gallery pictures would be far better for me. Including description text if possible, along with descriptions being searchable.

Are there some settings I'm not finding?

Thanks.

Can you post a screenshot? I've only tried tried it in Ubuntu and the text size is about the same as in the other versions.

Thanks for the prompt reply.

This is a full 1920x1200 screen shot. Linux Mint 14.

This is the image I saw on your website gallery which looks much better to me,especially if the columns were selectable and the description was shown some how. Maybe like Outlook does it.

Basically I am trying to find a calendar that will display and search like Outlook does in 'agenda' (IIRC) view. Nothing else I have tried in Linux is as near as your software. I am perfectly happy to buy Rainlendar if I can get it near enough to the Outlook format.

The font seems wider and smaller than on my system. I'll see if the date font size could be increased. The old Manager dialog is not supported anymore.
