TO DO List functionability
Posted by tcressy - 2006/11/01 01:01

The ToDo list box should be resizable (ie be able to change the height and width with the mouse).

The ToDo list should have a "Manual" sort function, so that I can drag n drop (or move up and down) my jobs to the order that I want them to be in. (like the edit window for Rainlendar 1).
This feature is sadly missed in Rainlendar 2
:(

Agree!
Want to quickly be able to prioritize by having most important tasks at the top...

Cheers!

Nice suggestion, I second that.

Prioritizing the tasks is planned (as soon as I can figure out some nice & easy way to do it). Resizing the list with mouse is quite difficult to implement so it's not likely to appear any time soon.

If the mouse can't be used to resize the list, at least an option could be provided to set the length in the config window.

Looking forward to the updated version! :)

A bit hard to find perhaps but it is in the options:
Options->Skins->Advanced->Todo List->Settings->Todolist height

Great!

Do you have an idea of when you think it might be implemented. This feature would be so helpful!

I most definitely agree. I sorely miss the ability to precisely prioritize my todo list. Even if it's too difficult to pull off a drag-and-drop prioritization, the good edit window seen in Rainlendar 1 would be sufficient. Thanks a lot for looking into this!
