
How to hide Taskbar Icon?

Posted by Jensematz - 2006/10/30 11:40

Until today I used Rainlendar 0.22.1. In Version 2.0 (lite) I found no option to hide the Taskbar Icon.

And how to import the Datas fom the older Version?

hi,
go to options, advanced, there you have a line called ShowTrayIcon, set this to false and the icon should dissappear, for importing: right-click the calander, choose manager, file, import , rainlendar.ini format , and point to the event.ini file in your old rainlendar install, same for your todo.

greetz

i just dl'd the lite edition (2.4) and have also found that i cannot get rid of the button on the taskbar. I have tried disabling the systemtray option, but that did not fix it.

any insights would be greatly appreciated!
