## Alignment

Posted by BouncingB - 2009/08/26 15:53

---

I am working on a new skin based on Shadow4.

I can't seem to get the alignment. I want the month centered in the top and the year centered in the bottom of the calendar window.

From the alignment description this is what I think it should be but it doesn't work. This should be simple.

I can get them to work by hardcoding the coordinates but of course the months won't always be centered.

What am I doing wrong? I would like to see some other samples of xml. Except for the two by Rainy the skins I have seen are all using inis.

Hmmm... the alignment doesn't seem to work correctly when normal fonts are used. I'll have to check that. Anyway try something like this:
