
Resizing scrollgroup

Posted by BouncingB - 2009/08/27 19:10

How do I make a scrollgroup smaller than the window? I want to do this -
y2="%Todolist_height%-25" but this code does nothing. Can I do arithmetic with these variables?

This works but will not resize when the todolist height is changed.

You should define the origin2 as BOTTOM-RIGHT so that the item's height is relative to the window's height.

In order to get that to work I have to set the height on the window and then the window doesn't resize. It's driving me crazy.
