## S.O.S newbie!

Posted by angel8505 - 2009/09/17 00:37

---

Hello everyone! I've been using rainlendar app for the last months and I've found it so interesting that I have some ideas to customize it to my needs. Unfortunately I've been researching about Lua scripting and skin customization and haven't yet found the way to get to know how to modify the script. I would appreciate if someone can give me some material to read or something. I have to say I'm a newbie but I'm interested and a fast learner.

any comments, help, links, anything would be greatly appreciated.

BTW: I use it under OSX.

Thank you very much!

The Rainlendar scripting isn't very well documented at the moment. The help file contains a reference document with all the functions but that's about it. So, the best option is to check how existing skins use the scripts and start modifying them. A good place to start is the Shadow4 widget addon which uses the scripts for various different things.

thank you Rainy. I'm going to start by looking at the reference document by now.

Thank you very much.
