Keeps poping up on top
Posted by Cool Javelin - 2013/08/14 12:56

Dear Rainlendarians:

Rainlendar is great, but there is one thing for which I would like some help.

The events windows keeps popping up on top of what ever I am working and I want it to stay on the bottom.

I have tried "desktop", "on bottom" and "normal" in the Options->general settings, all to no avail.

I have searched any settings in the Options->advanced->events list sections and found nothing relevant there.

For example, I am using Firefox to type this message now. As I type, Rainlendar pops up it's events list on top, yet I am still able to type here. I can reach all buttons in Firefox except for those under the Events List. The only way I can get Rainlendar on bottom again is to click the blue toolbar at the top of Firefox. Then all is good for a few minutes after which Rainlendar brings it's events list back on top again.

This isn't limited to Firefox, but occurs with any window.

Can someone help me?

Thanks Mark.

PS, I am using WinXP SP3 (2 monitors) and Rainlendar 2.11.1 (b129)

==========

Did you get this fixed?

No, not fixed yet. I have increased the snooze time to 30 minutes, but this isn't really a fix, just a band aid.

I think you are talking about the Alarm window. If so, I have a workaround for that. I have a separate post in this forum about the same problem.
