Google-Colours
Posted by sesam - 2013/09/15 11:31

I have a lot of Google-Calendar synced with Rainlendar. How can I get the Google-Colours in my Eventlist?

Bests!

To set colors for Google calendars:
- right click on a window
- options...
- calendars
- (select your google calendar)
- options (lower section)
- color mapping

Repeat for each calendar

Rainlendar pro Beta
2.12. (b133) 64bit

There is no Point "Color mapping".

Can you help?

Yes one of the issues I have with this app is that I cannot differentiate by color between the various calendars. The option stated already does not appear to be there. Beyond "Color mapping" I am wondering why there is no palette available to select from to choose "what color will be used for these events?".

I think mapping Google colors to Rainlendar is a good idea ... but having an override palette too would be nice if not nicer - since the palette within Google is poor to start with.

The other immediate issue I see may be a "font" and "bg" color palette both may be required - not just a single color option.

thanks

The "Color mapping" is only available in the beta versions and you need to use the "Google Calendar (v3)" type calendar.

The appearance of the events in one calendar can be changed from the "Visual category" field in Options->Calendars.
