## where to view the syntax of fonts description

Posted by leopoldus - 2009/10/03 04:55

---

Hi to all!

I could not find anywere any specifications for older format of skins. Could anybody give a link (if there is).

Actually I need help with one certain font properties description. For instance in the Impared-Rain skin settings file Impared-Rain\_475w300h\_with 12hClock.ini I found in many sections the following directives:

Rasterizer=FONT

Font=-26/0/0/0/700/0/0/0/0/3/2/1/34/Arial

Align=34

Could anybody explain, what those numbers (and words as well) mean. I've tried a bit to do experiments, but have bot got any success :(

Thanks in advance!

You can find the documentation for the old ini-file format from the Rainlendar 0.22.1.

Sorry, I am not suure, that I've got the right idea. Do you mean, that I shoud install Rainlendar 0.22.1 (<http://www.ipi.fi/~rainy/Rainlendar/Rainlendar-0.22.1.exe>) and then open Help manual from inside it? Wouldn't it cause any conflicts with the istalled current version?  
Thanks.

The old version won't interfere your current installation as long as you install it to a separate folder. The help files should be also in the source archive so you can access them without having to install anything.

Soory, but the link you have kindly provided links to the executable "Rainlendar-0.22.1.exe", which seems to be some kind of intallator, not SFX-arhive or something like that. How is it possible to extract certain fail from this installator?  
Thanks in advance!

Here's the link to the sources: [http://www.rainlendar.net/cms/index.php?option=com\\_easyfaq&Itemid=26#faq1](http://www.rainlendar.net/cms/index.php?option=com_easyfaq&Itemid=26#faq1)

I'm afraid it is not proper link. It leads to the question "Is it possible to sync Rainlendar with a mobile phone?" at Rainlendar FAQ page. Other answers on this page do not also provide any link to Renlendar source arhive :(

Sorry, wrong link. Here's the correct one: <http://www.ipi.fi/~rainy/Rainlendar/Rainlendar-0.22.1-src.zip>

That is finally! File `Rainlendar-0.22.1-src.zip\Rainlendar\Help\Skins.htm` includes the full specufiction for font properties in old format skins. Thanks!
