
Editing colours in a skin

Posted by phantom_lord - 2009/10/11 17:45

Hi, I've been using this program for a while and think it's great!
this is the skin i'm using atm, and i was just wondering if anyone could advise on how to edit the colours. I'd just like to change the month and year in the calendar.

Thanks!

Just uncompress the skin and see what it contains. The skin uses images at least for the backgrounds so you need to use a paint application if you want to modify them. The rest of the colors can be found from the xml files (see e.g. the elements.xml). You can find instructions how to uncompress the skin from the Rainlendar's help file.
