Can\'t add events and task to caldav calendar.

Posted by alexlaciencia - 2014/03/02 20:30

I am using version 2.12.1 of Rainlendar and when I try to add events
and tasks i receive the following error:
Caldav Error (Alex Calendar)!
An error has ocurred when uploading data to URL

Server response: (0) 500 Internal Server Error

The server is running CentOS 6.5 and Zimbra 8. Thunderbird lightning
works fine and also Zimbra web interface. I have configured Rainlendar
exactly as older versions that has worked before. The problem is only
when uploading changes, now i'm only able to read events and tasks
using Rainlendar.
Log file attached.

Thank you very much. http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2-266bee92ea131ba3c0a84093564e5645.log

Do you have access to the server's logs? If yes, can you check from there what the error is in there. The error 500 that is sent to the client is just a generic error message which doesn't really tell anything.

I'm sorry. I don't have access to server logs. I thought the client logs would be enough.
Recently, i realized existing events/tasks can be modified. The problem is only when uploading new events/tasks.

Is the server publicly accessible? I could try it myself and see how Lightning uploads the events compared to Rainlendar.

Sorry for answering so late. My Zimbra mail service is not public. It is only available from local intranet.
