
Windows gone

Posted by Kvan - 2006/12/04 09:43

I can't find my Rainlendar2 windows - turning them off and on doesn't help. Is there a way to reset their position? I'm using beta build 29.

I'm not sure if this is the solution to your problem but when I first installed Rainlendar and turned all the various 'windows' on, some were hidden underneath the windows taskbar at the bottom of the screen.

To fix it I just dragged the taskbar off to the side of the screen temporarily and dragged the Rainlendar windows up then moved the taskbar back to its usual position.

I had that problem too, but had fixed it already.

It turns out that Rainlendar2 has an issue with IconX from Object Desktop - turning off the latter gets my Rainlendar2 windows back. This problem didn't exist in Rainlendar, though.
