Rainlendar 2.1 build 34
Posted by Rainy - 2007/03/03 10:33

Build 34 can be downloaded from here:
Windows: Rainlendar-2.1.b34.zip
Linux: Rainlendar-2.1.b34.tar.bz2

This is beta version! It has not been tested.

- 03 Mar 2007
o The tray icon is now removed before it is updated.
o More fixes to the weekly recurring events.
o Keeping the windows inside the screen area is now optional (Options->Advanced->KeepOnScreen).
o Advanced options can be now localized.
o &-char wasn't shown correctly in the menus. Fixed.
o Rainlendar backups settings and local calendars automatically on startup.
o Improved the error handling in the restore operation.
o Added an option to import Outlook labels as categories.
o The iCalendar plugin can monitor changes in the file and refresh automatically (Windows only).
o Added delete button to the todo and event dialogs.
o Todo and event dialogs are now visible in the taskbar
o Moved status items out of the sub menu.
o Added read only flag to the calendars. Enabling it ignores all write operations to the calendar.
o If a network calendar is set as read only, removed items from the online calendar are automatically removed from the offline copy too.
o Items are synced to the online calendar only if they were added after the last sync.
o The last modified time was updated only if the changes ware made from the edit dialog. Fixed.
o Tasks sorted by priority uses the value instead of the string.
o Added an advanced option to get rid of the delete confirmation dialogs.
o Changed the password encryption so that it doesn't depend on the hardware anymore.
o Duplicate icons can now be combined in the calendar (Options->Advanced->Combine icons in the calendar)
o Added support for Leet-Speak language.
o The network thread is stopped automatically when the calendar is disabled.
o The category list shows also the categories from the skin file.
o Weekly recurring events from Outlook were shown in incorrect day. Fixed.
o Added "Grow upwards" option to the advanced skin options.

Thanks Rainy!! That fixed the reoccurrence issue with the Outlook plugin.

New Bug: Completed tasks still show even with "Hide Completed Tasks" selected.

Yes, the tasks from Outlook are read incorrectly (the due date is also missing). I'll fix that.

Big Thanks !

especially for:

Changed the password encryption so that it doesn't depend on the hardware anymore.

Seems to work for me !

Hello Kimmo,

Thanks for all of the updates again.:P

I am having a new problem in this version. The custom height is disabled for the skin. Changing the number no longer has any effect.

Thank You,

JW 'Yawn' vanLohuizen

I have been having network communication problems so I don't know if that is to blame. I have my config files on another computer. An hour later it updated to the new height.

Post edited by: JWvanLohuizen, at: 2007/03/05 22:59

In further review the size is further dictated by displaying a complete entry. I tested this by removing an entry and it immediately reduced the window size. So this must mean that the height is overidden by this factor. Is this right?

Moin !

The "default categories" selection under the advanced options doesn't work anymore.

When I crate a new Event or ToDo all categories are shown. This happens since its possible to select multiple categories.

Under calendar options -> visual category only my selected "default categories" are shwon, this seems to work correctly. The same on show/hide cat options for calendars, todo, etc.

BTW: What does the "Grow upwards" option do ???

I think Grow upwards is for Todo and Event list
some people like to put them at the bottom of the screen

, the original list grow downwards when new items are added and they will grow out of the bottom of the screen. By using Grow upwards everything can be kept inside the visible area.

JWvanLohuizen: The window's height only defines the maximum size it can have. The size is automatically reduced to fit just the contents. If you want to the window to have a constant height you need to set the shrinktofit to 0 in the eventlist.xml.

Bandit: The list of categories are now read from the skin too so with Shadow4 you'll see all of them. I'll make that optional.

Thanks !

Purchased the pro version one minute ago!

Loving Rainlendar !

Not a big issue, but i'm finding that the tooltip is showing the wrong day on the new build. I have to click or wait for it to correct itself. Anyone else getting this/

Do you mean the tooltip that is shown in the tray icon or does this affect also the tooltips that are shown in the calendar?
I wasn't able to reproduce this...
