Rainlendar 2.2 build 45
Posted by Rainy - 2007/08/04 08:17

Build 45 can be downloaded from here:
Windows: Rainlendar-2.2.b45.zip
Linux: Rainlendar-2.2.b45.tar.bz2

This is beta version! It has not been tested.

- 17 Jul 2007
o Localization fixes.
o Rainlendar wasn't always able to create the configuration file. Fixed.
o Fixed authentication issues with the Google calendar.
o Removed limit from the string length in the list since it breaks the Outlook links.
o Added support for Sunbird's alarm acknowledge property in the ics files.
o Added -a command line argument which can be used to create events from command line.
o Time item supports free timezone definitions. Use format: "(+/-)HH:MM" (e.g. "-02:30")
o Added calendar list window to the Shadow4 skin.
o Fixed a problem in the alarm for biweekly events.

Added calendar list window to the Shadow4 skin.

Very nice Feature !
Thanks for it.

Found Bug:
Skins -> Calendar List -> Settings

The "visible calendars" options has no effect.
I selected all callendars except the "default" one, but it still appears in the selection list

I didn't even thought that the setting should affect the calendar list but I guess it could do that. I'll make it so.

What effect should the setting have ?

Or do you forgot to remove the option from the settings menu ?

The setting is for the window. It doesn't necessarily do anything unless the window contains items which utilize it.

Rainy, thanks for your hard work, I really appreciate it! Regarding to the 2.2 version, is there any way to change the font color on the "todo" list, it used to be white and now is green, sincerely I prefer it the way it was.

Thank for everything,
Best regards,
MaNRo

The green follows the day color in the calendar. You can change it by editing the skin. The colors for the events are defined in the elements.xml file so open it with a text editor and replace all color="100,255,100,255" texts with color="255,255,255,255".

You can find more instructions how to edit the skins from the manual.

I've received this message from my NOD32 antivirus after downloading of build 45:

Archive:
http://www.rainlendar.net/download/Rainlendar-2.2.b45.zip
Treat:
Probably unknown NewHeur_PE virus
Comment:
The object contains a treat to your computer.

:(

Rainy,

With your help now I have the elements the color I want but I couldn't find the way to make them turn red when the time for the task to be completed is expired! :unsure:

Once again thanks for all the help!
Regards,

Open todolist.xml file, find <overdue item> and change the color code to 255,0,0,255. Make same changes in other calendar windows if they have To Do items.

Had the same 'problem'. Reported it to Eset. Turned out to be a false possitive. Should be fixed in one of the upcoming updates of NOD32/ESS.

Alexander, almost there ;)

I give look to the todolist.xml and the color is set to 255,0,0,255 but still the same, then I just uncheck any category set to the task and doing that it work the way I like, now when a task due time expired it turns red, but if I set again any category, for example "Work", it back to the color set to the category and doesn't turn red when time expired :(

Any ideas? :)

Regards

If one event has one color of category (less important for you) and at the same time it has another one of overdue status (more important for you) set layer for overdue items higher than layer of category in elements.xml.
Fragment of elements.xml:
<category id="Work">
<appearance target=... layer="1" ....</category>

Fragment of todolist.xml:
<overdueitem> <appearance... layer="2" .../>
</overdueitem>

You can find more details in Help of skin.

I been having this "issue" (I think) for quite some time now.

When I create a task and specify a weekly reccurence that go from Monday to Friday and skip weekends (Saturday & Sunday) when it comes to the task to be completed on Friday it do not skip weekends as it was specify on the task's creation, instead of it, the task shows sometimes on Saturday and Sunday and other just Saturday or Sunday.

Is this a know issue or just me doing things in the wrong way (more likely) :lol:

Here a picture sequence of this "issue"

http://www.geocities.com/manromalik/task_reccurrence.png

Once again, thanks! ;)

There have been quite a lot of issues in the weekly recurring tasks.
I'll try to check what's wrong with it this time.

---

o Added support for Sunbird's alarm acknowledge property in the ics files.

i'm not sure, if this is by design, or its just a bug.
i consider this a bug.

i create a date in sunbird with alarm.
(thunderbird lighning is installed too and will alert too)

if the alert-time is reached, all three (sunbird+thunderbird lighning+rainlendar) pop up their alarm window.
(which is ok, because i have all three programms started, so i don't miss the date...)

if i click "ok" on the sunbirds alert-window, the rainlendar alarm-windows disapears (without letting me click dismiss or something else), which is *NOT* what i want. also, if i click on the "ok" on thunderbird-lightning, the rainlendar window disapears.

would you please explain this to me? i think, i'm technically aware, why this happens (rainlendar rereads the ics), but i don't know, if this is a good behaviour of rainlendar.

==========

Re:Rainlendar 2.2 build 45

Posted by Rainy - 2007/09/01 05:05

Yes, Rainlendar reads the modified ics file and notices that the alarm has been already dismissed. I can make the support for Mozilla alarms optional but then you'll always have dismiss the alarms in Rainlendar even if they were already done so in Sunbird. The other option is to disable the automatic monitoring of the ics file. I'm not sure if there is anything else I can do about this problem.

ok, thanks, i see.

rereading the ics files is mandatory for me, so disableling does not work for me.

i recommend to let the decisions up to the user (a good default assumed).
in the advanced options let him/her choose, what he/she wants.

dismissing every alarm in rainlendar, which was dismissed in sunbird before is a little bit of annoying maybe, but it will definitely *remind* the user :-)

now, that i know about how rainlendar works with this issue, i will learn to work with it :-)

so thank you for implementing that feature so fast!!

FYI: ESET's NOD32 virus scanner still identifies the binary as a possible NewHeur_PE virus.
