Activate calendar
Posted by gord - 2006/11/08 12:06

On the older version, I was able to get the calendar to pop up by assigning a hotkey to "activate calendar". The new version does not have this option and none of the similar commands (show window, toggle window) work this way. What can I do? Thanks.

Well, I have found that options in options/hotkeys, but I noticed, I can't any longer set "/" or any diffrent keys without using "ctrl", to any of avaible options.

---

gord: I'll add an option for it.

Gomo: That is so by design. It's usually not a good idea to set hotkeys for a single key. If you really want to do that try editing the rainlendar2.ini file and set the Modifier in hotkeys to 0.

Didn't work :(. Worse - couse to report such bug "c:/program files/Rainlendar2/Rainlendar2.ini', line 1:'=' expected" at startup. Except that I didn't notice any other bugs.

You must edit the file with some editor that understands utf-8 files (e.g. www.pspad.com).

I tried to make as you said, and I only manage to set key from main field of keyboard - I couldn't set key from numeric keypad. I found that in ini file the value corespond with ascii value - but it seems to numeric keypad is out of range.
I'm not a programmer, so I am sorry if said sth stupid.
I'm trying to set some key (only one) from these which I don't use i.e. "/" from numeric keypad, or "scroll lock". Is this posible?

The special keys start from 300. It's not possible to know them except by looking from the source code.

/ is 396
scroll lock is 367

Didn't work (I think its related to modifier number. I tried few). But I set key to Win + q so I found finally a compromise. Thanks for help and patience :)
