color by priority

Is there any way to apply a specific color to priority? For example: I wish to high priority events on To Do List were always be displayed in red, despite of displaying type (ie. by date/category/priority). Is that posible?

I am pretty sure it is not possible, I will look more into it later. But you can add another category "important" to them, to have them turn red. If you display by category then it will have an important section and it also in the other associated section.
