Aerial RL - help
Posted by workinprogress - 2008/01/29 14:33

Hey guys,

I was planning on using Aerial RL:
http://danillooc.deviantart.com/art/aerial-RL-33781258

but the button that switches from small-normal doesn't seem to work. Do you guys know anything about that?

Also, do you happen to know how to scale the skin?

Thanks guys

This skin was made for old Rainlendar version. Scaling and some other functions not supported.

The button that he is referring to is a skin changer button that uses an old litestep bang command. The small and the normal are actually different skins. Is there a way to do this using LUA scripting? It was a nice feature. :)

It might be possible to do by changing the ini-file directly with a lua script. I'll have to check if there are going to be other problems with the approach.

Wow! That would be great if it could be done. :)

Just bumping this thread so that you know I'm still interested.
