Automatically import Windows Calendar calendars

Posted by MoonJihad - 2008/06/08 02:50

It would save a lot of work if the calendars present in Windows Calendar would automatically get added to the list of calendars in Rainlendar. They are stored as iCalendar files in the user's homedir, like so:

C:\Users\\AppData\Local\Microsoft\Windows Calendar\Calendars\.ics

The file Settings.xml describes the list of calendars present as well.

Having them added correctly would enable having both convenient access to the task list on the desktop by using Rainlendar and convenient access to edit events with Windows Calendar, which has a week view.

All that is required is adding the calendar properly in Rainlendar, which is currently a manual process. Windows Calendar properly deals with modifications from Rainlendar and vice versa.

Thanks in advance!

Edit: The forum ate my path :S

I wasn't aware that Vista's calendar could updated itself automatically when the ics file changes. Cool. It shouldn't be too difficult to make Rainlendar to read the calendars automatically from the xml file. I'll add this to my todo list.

Sorry, if i up this old post, but i cannot find how sync with Windows Calendar in Vista :p

It's possible? ;)

Thanks

Create a new calendar to Rainlendar (Options->Calendars) and point it to the Vista calendar's ics file. The location of the Vista calendar files is described in the first post.
