Rainlendar 2.3 build 61
Posted by Rainy - 2008/07/16 04:40

Build 61 can be downloaded from here:
Windows: Rainlendar-2.3.b61.zip
Linux TAR: Rainlendar-2.3.b61.tar.bz2
Linux DEB: rainlendar2-pro_2.3.b61-1_i386.deb
Mac OS X (Intel): Rainlendar-2.3.b61.dmg

This is beta version! It has not been tested.

o Dates were set to incorrect century if the date format showed only the last two digits.
o For all day events the alarm now shows only days to the due time instead of hours and minutes.
o Added support for HSV and contrast/brightness in the bitmap fonts too.
o Fixed contrast and brightness calculation.
o New categories: Game, Sport, Health, School, Party.
o The today marker is now customizable in the Shadow4 skin.
o The skin settings dialog isn't modal anymore since it caused problems in Mac.
o Google Calendar's session id was not parsed correctly. Fixed.
O Implemented "Click Through" and "On Desktop" features for the Mac version.
o Windows move automatically to the screen edges when resolution changes.

o The today marker is now customizable in the Shadow4 skin.

There's a small error in the sidebar.xml file:
appearance layer="10" element="bitmap.today.%Shape%" align="CENTER"

it should be:
appearance layer="10" element="bitmap.today.%Today_shape%" align="CENTER"

And btw, "Vejr" is "Weather", "Nedtælling" is "Countdown" and "Billeder" is "Photos" in danish. B)

Windows XP SP2
Rainlendar 2.3 build 61

When I turn on any of skins Vitrum08.1.5 log file give me many times of warning:

19:47:23: WARNING: The item "" has invalid x2 ().
19:47:23: WARNING: The item "" has invalid y2 ().

Vitrum08 repeates this message 3 times, Vitrum08w - 60 times (!).
What is wrong for this beta?

Those warnings come from the time items which don't define the width and height. The warning is unnecessary so I'll remove it from the next build.

Rainlendar doesn't start on Windows 2000. It requires faultrep.dll which is available only on Windows XP and later.

Ok, I'll change it so that the library is loaded only if needed so it doesn't prevent the startup.

---

with this build using same skin as on b54 is it moved to the left by apprx.100px :((originaly placed in right top corner)

everytime i move it back to right top corner - after while (refresh or exit-start or google cal renew) it's moved byself back by 100px from right to left

what is that??

Hello kriznik!:)

I had the same problem. I found out that in the ini-file the variable 'LockWindows' is set to '1'. When you set it to '0' you will be able to save the new calendar position.

Have a nice try!:)

Rorohiko

---

hello
in docs/settings/user/.rainlendar2/...ini i allready have LockWindows set to 0 ... :(
just now looked into it :(

Try setting Options->Advanced->Keep on screen to No.
