Eventlist & ToDolist Position
Posted by DerGuru - 2006/11/14 19:12

Im using 2.0b26 because the google-calendar-bug with the times displayed wrong.
How do i fix the position to the upper left edge of my screen?
Everytime i restart or even only refresh its placed to (1150,17).
Its not that much of a problem since i dont oftne restart or refresh rainlendar, but i'd appreciate if it uses the Coords i give it.
I tried different modes (normal, desktop,...) nothing helped.

I took a look to the log, but didnt found an error there.
Even took a look to the ini.
While its open and in the upper left corner the position is (0,0), after i close rainlendar its still (0,0) but after open rainlendar again it says (1150,17) again :(

Same for ToDo, after deleting an entry, it jumps to where Rainlendar "sits" on my desktop.

Regards
Andi

oooooh it's a google calendar problem!?
I've been wondering what the deal with that was!
sorry to hijack your post - I don't know how to fix your problem, but thanks for indirectly helping me out with mine.

Well, its not a Google-Problem,

its just, that Google always sends UMT with its Events, and sets a timeshift before, according to your local time.
Rainy had fixed/implemented this with 2.0b26 i think.

Andi
oh, I think I'm using Pro v.2.0(b25) - build Oct. 28, 2006
(b26) is a beta or ?
