Rainlendar_SetEventHandler - incomplete Help docs

Posted by Jotaf - 2008/11/18 16:52

Hey there, don't mean to be complaining or anything, but I'm interested in this little piece of info and that's why I'm posting here. In the help doc for Rainlendar_SetEventHandler, a table of event values is mentioned but missing. I'd like to know what other values I can use in a script :)

And while we're at it, 'dirtree' doesn't seem to work (in the Shadow4 Photos script, scanning a folder). Says it's nil... :(My version is 2.4 (downloaded it about 2 weeks ago or something).

You need build 65 or newer for the dirtree. Here's the part which is missing from the help:

Value	Event data	Description
1	MouseEvent	Left mouse down
2	MouseEvent	Left mouse up
3	MouseEvent	Middle mouse down
4	MouseEvent	Middle mouse up
5	MouseEvent	Right mouse down
6	MouseEvent	Right mouse up
7	MouseEvent	Mouse move
8	MouseEvent	Mouse enters the window
9	MouseEvent	Mouse leaves the window
10	MouseEvent	Left double click
11	MouseEvent	Middle double click
12	MouseEvent	Right double click
13	MouseEvent	Mouse wheel
1000	nil	Power resume event. Send when the computer resumes from suspend/hibernation. This is a global event.

MouseEvent data is a table with this content:

Field	Type	Description
x	integer	The x-coordinate of the mouse.
y	integer	The y-coordinate of the mouse.
wheel	integer	The mouse wheel value.
button	integer	The mouse button state.

Thanks :)

Where can I get b65? I just re-downloaded and reinstalled Rainlendar but it's still the same build: 64.

EDIT

Forget it, it's in the beta forum. I've got an add-on I'm working on, I'll tell ya when it's ready. ;)
