
multiple instances

Posted by Tropf - 2006/12/05 14:13

Hello,
I just got Rainlendar 2.0.1 and I'd like to have two instances running at the same time. Two people are using this computer and we'd both like to have our calendar on constantly.
How can I do this?

So, you are using the same user account and want to have two Rainlendars running at the same time?

You can start multiple instances with `-m` (or `--multiple`) command line argument. You can also use `-c` (or `--config`) to define the settings folder or otherwise both instances will use the same settings (or alternativelt just make two portable installations to different folders).

"So, you are using the same user account and want to have two Rainlendars running at the same time?"
-Right.

Sorry, I forgot to mention that I did portable installations. Now I have two folders (A and B) on my desktop. When I start Rainlendar2.exe from folder A it works fine. When I then (A running) try to start rainlendar2.exe from folder B nothing happens.

the `-m` probably still needs to be used to run them. You can do this from the command line or from the options of a shortcut. I don't think you can define it with the executable itself.
