
current date in system tray icon does not update

Posted by leopoldus - 2009/12/27 09:40

I've used Rainlendar for months, but some days ago an odd glitch has appeared: the date in Rainlendar's icon in the system tray does not update when the system current date changes and always shows the date when Rainlendar current session was started :ohmy:

However the calendar on the Desktop shows the correct date (see the attached image).
Restarting Rainlendar has not solve the problem.

I've been experiencing the exact same issue, the only way to fix it is to exit the program and restart. Has this been fixed?

The problem has not been fixed because I cannot reproduce it and I have no idea why it doesn't work in some computers.

I'm having the same problem and I frequently suspend or hibernate my laptop.
Could that be the reason?

Yes, suspending the laptop is what causes this. The problem is that I do that multiple times every day and I've seen this happen only once before.

Yes indeed I managed to figure it out when I tried using it on a laptop that I put to "sleep" in between going to college classes. I wonder if there might be some way to fix it to "restart itself" when a computer/laptop comes out of sleep mode without having to completely start/restart the program itself every time. I miss having this program as its the best of its kind that I've found.

I have the same problem.

-
- 1) I'm running a desktop that's on 24/7 with no sleep mode.
 - 2) The issue only starts on Monday mornings then that date stays the same until I reboot the system.
 - 3) The date showing is always the immediately preceding Saturday's.
 - 4) My calender is set showing the week as Sunday to Saturday.

So this just started happening to me about a month ago. I know this is an older topic but has this been resolved? I too have a DESKTOP which is on 24/7 (no sleep - just screensaver). Its a Win 7 Pro (x64) machine with plenty of ram etc. I have also had Rainlender on this machine for some time (1 1/2 years.. ish)and never had this problem. Any ideas would be appreciated. The only way I am currently able to resolve the issue is by closing out of the program and restarting it which is not the end of the world but...

Thanks in Advance!

T
