Intel OSX version?
Posted by kman - 2006/10/29 23:23

Now that OSX is Intel-native and has a BSD core, I would think an OSX version of Rainlendar would be fairly easy to compile. Any chance such a version will be forthcoming anytime soon?

(Yes, I read the faq, but how can you gauge demand for something unless you know people want it?)

==========

Re:Intel OSX version?
Posted by Gideon007 - 2006/10/30 20:55

I second this motion. At the latest I'm going to switch to OSX when Leopard is coming out and then I want to try to use Windows not that often and I'll miss Rainlendar then :)

==========

Re:Intel OSX version?
Posted by ishermandom - 2006/11/01 03:22

I'd like to add my vote to the list. I've been using a Mac for over a year now and still have not found a good replacement for my favorite Rainlendar.

==========

Re:Intel OSX version?
Posted by Gertius - 2006/11/19 11:09

If it is possible, I also would really like to see your nice app run on Mac! I only moved to Mac 4 weeks ago, and your program was possibly the one I used most on my Windows PC... so... please? :cheer:

==========

Re:Intel OSX version?
Posted by jkc - 2007/01/19 15:56

I totaly agree with this. The problem is that not all previos Mac users know about Rainlendar because it hasn never been available to them. I just got my first mac with an intel chip so that i can still run windows in tandem, i like OS X so much better but i cant use rainlendar. Any mac user that I have shown rainlendar to wants it! How can you judge the demand for something that people dont even know that they can have yet? Rainlendar could put it on Apple's website just like they do with widgets all the other stuff. Then Mac users would definetly be exposed to it, and download it!

---

i agree, i've been using a mac for 2 years now and not being able to have an app like Rainlendar is depressing. all my PC using roommates flaunt it in my face. the closest app to Rainlendar i've found is PandoCalendar and it is by no means close to what Rainlendar offers. PLEASE MAKE RAINLENDAR FOR MACS!! :woohoo:

==========

Re:Intel OSX version?
Posted by eyecandy - 2007/01/29 17:50

---

yes, i second this. please port rainlendar to mac os x (universal binary?). there is nothing comparable to this. ical-support

would make this perfect app the best.

the mac community (not only the few writing here) will appreciate it.

Yes, I too vote to please implement a version of Rainlendar for Mac!
I agree with the author who wrote that the Mac community would appreciate it, and I've been buzzing around here hoping my favorite program that ran on my PC would have compatibility with my first Mac.

I too second the OSX version, and would register the paying version to support this :-)

==========

Re:Intel OSX version?
Posted by Herve5 - 2007/03/27 06:19

Me too!

I was using up to now version... 0.22! on a PC for years, dreaming of it on a mac - I even tried to run it on the mac through Parallels/windows in what they call the 'coherence' mode (ie only the Rainlendar windows appears on the mac desktop) but this is really heavy :-)

Hervé S.

Re:Intel OSX version?
Posted by pongu - 2007/06/04 18:41

I'm not sure what to make of this but I find it interesting that there are almost 1400 views of this topic yet only 12 replies at the time I wrote this. That's more views than most topics on the entire site. Either requesting an OS X version is a fascinating topic or we have some Mac fans who aren't speaking up. Surely the users who have already posted aren't checking this topic that much, are they? It seems to me that porting to Mac makes sense. Consider that Mac users aren't as familiar with freeware as PC and Linux users. Sure, there's freeware for Macs but it seems to be much less common. The Mac community seems to love their handy dandy apps enough to pay for them. I'm willing to bet you port it to Mac and you'll be pleased.

Posted by fosho78 - 2007/07/30 19:20

Hey! I just switched to Mac a couple days ago and the ONLY thing I miss from my PC is Rainlendar! I really wish you would compile it for Mac! PLEASE PLEASE PLEASE make a Mac version! Is there any way we can know if you're even considering it?

==========

Re:Intel OSX version?
Posted by DeeLight - 2007/12/11 00:04

Just registered to say that I would also like to see a mac version. I still use the PC sometimes, but I use my new Mac a lot more and I realy miss this application. Any way we could at least know if a mac version is planned?

==========

Re:Intel OSX version?
Posted by Rainy - 2007/12/11 03:23

I just switched to a Mac myself too, so yes, an OSX port of Rainlendar is planned :-)

==========

Re:Intel OSX version?
Posted by HiTec - 2007/12/11 05:11

Yahooo.. what a nice message. :)

Two weeks ago, I also bought a MAC, and I consider myself now to buy Rainlendar to synchronize the data on Google calendar and iCal over the internet to my PC.
I´m look forward for an OSX implementation. Hopefully in the near future.

A synchronization via the Internet or the LAN, by the PC or MAC, should be an important point.
Not everyone works only on one machine!

regards

---

excellent news, look forward to a mac os x version. sync google cal with ical online cool. a quick question is it possible to sync with yahoo calendar?

let us know when it hits beta, a really nice to do list software for mac, Anxiety http://anxietyapp.com/

==========

Re:Intel OSX version?
Posted by dozy - 2007/12/30 12:41

Is there any news about the Intel OSX development?
When should we expect a beta release?

An iCal.app plugin for the OSX version would be perfect!

==========

Re:Intel OSX version?
Posted by Rainy - 2007/12/30 14:00

No news yet. I also cannot give any estimates since I have no idea what kind of problems there will be. Most of the development docs for OSX seems to focus on Objective C which I unfortunately cannot use in Rainlendar.

==========

Re:Objective-C
Posted by ishermandom - 2007/12/31 21:56

Rainy wrote:

Most of the development docs for OSX seems to focus on Objective C which I unfortunately cannot use in Rainlendar. You will probably want to use Objective-C to control the GUI, unless you find that you don't need to change much of your existing code for the GUI. However, you can continue to use C/C++ for the backend code: see this document.

It's great news that you're working on Rainlendar for OS X! :)

Edit: I do not understand why, but for some reason capital-o Objective becomes _object_ive, including in the url I linked to, so you'll need to manually change that for the link to work :/

==========

Re:Objective-C
Posted by Rainy - 2008/01/01 10:06

Thanks for the link. I'll take a look at it.

The forum adds the underscores automatically to some words. I guess it's some kind of attempt to prevent cross site scripting and other hacks.

==========

Re:Intel OSX version?
Posted by dozy - 2008/01/12 21:36

Hi!
Are there any news? :)
I know it has only passed 2 weeks, but when we're used to deal with Rainlendar every day, and suddenly change to Mac where there's no application as great as Rainlendar... we feel for it.
I'm hoping we can see a beta version soon ;)

Regards.

==========

Re:Intel OSX version?
Posted by Rainy - 2008/01/13 07:33

It will most likely take several months before I can get a beta out. The platform is completely new and I have never done anything with it so it'll take a lot of time to get to know how things work.

==========

Re:Intel OSX version?
Posted by dozy - 2008/01/17 00:35

Maybe this will help you porting the linux version of rainlendar to mac:
(Porting UNIX/Linux Applications to Mac OS X)
http://developer.apple.com/documentation/Porting/Conceptual/PortingUnix/intro/chapter_1_section_1.html

Re:Intel OSX version?
Posted by dikkedimi - 2008/07/26 07:56

I have a feature request.

I recently discovered adium could hide in the screen edges just like the dock. It would be nice if rainlendar for mac had this functionality. Now it just sits on top of my other windows which can be quite annoying.

hope this feedback helped:laugh:

Cheers

==========

Re:Intel OSX version?
Posted by Rainy - 2008/07/29 10:26

Yes, it could be an useful feature. I'll check if its possible to implement in all platforms.

==========

Re:Intel OSX version?
Posted by dikkedimi - 2008/08/01 09:46

---

also another thing in leopard that would be useful is spaces compatibility. Right now it's only visible on space 1 of my 4 spaces.

hope this info is useful for you.

==========

Re:Intel OSX version?
Posted by Rainy - 2008/08/07 11:17

You can make any application visible in all the spaces from the System Preferences.

==========

Re:Intel OSX version?
Posted by dikkedimi - 2008/08/09 15:13

Hi,

I've modified the info.plist to hide the dock icon and the appswitch icon on mac, so it doesn't get in the way next to all of your other open apps.

I did this using a simple property list key trick i found here
http://www.macosxhints.com/article.php?story=20010701191518268

NSUIElement
1

I've attached the modified info.plist for anyone who has been looking for this setting.

cheers

Re:Intel OSX version?

Posted by Rainy - 2008/08/19 11:04

It seems to crash when the settings file is written. If you run this from the terminal does it work then (the command will create an empty settings file if it doesn't exist):

touch ~/.rainlendar2/rainlendar2.ini

==========

No it doesn't work, can i manually remove the settings file?

if that's the case, where is it located?

cheers

The ~/.rainlendar2/rainlendar2.ini is the settings file and yes, you can try to remove it (Rainlendar will recreate it automatically on startup). It might help if the file has gotten corrupted for some reason. If that doesn't help can you check if the rainlendar2.log file is located in the ~/.rainlendar2/ folder? If it is, can you attach it?

==========

Hey Rainy,

it is also not working for me on my MacBook.
Attached please find the rainlendar2.log

Greets http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2-11057fdb2618725a68c8146498cb584b.log

Try to run this from the terminal and see if Rainlendar can start after that:

```
echo "" > ~/.rainlendar2/rainlendar2.ini
```

Note that the command will erase all your Rainlendar settings so run it only if you have never been able to start the application.

Hey Rainy,

it's working now. Thanks.

Btw.. My ini-file is in ~/.config/.rainlendar2/

Greets

Re:Intel OSX version?

Posted by ifoow - 2008/10/07 10:26

Thanks again for the great work on the OSX version rainy!

I have a few things that I would like to see in future versions, maybe you're already working on them I don't know

- iCal support: I now sync my calendars via icalx.com but a direct sync between ical and rainlendar would be really nice.
- Growl support: For pop-up notifications

And another thing, It would be really nice if it would be easier to create multiple to do lists, I know there is some way to do it now but its kinda complicated. I would like to just be able to click "new to do list" somewhere and give it a name.

==========

Re:Intel OSX version?

Posted by Rainy - 2008/10/13 11:33

The Growl support probably is doable but so far I've been only found the Objective-C interface to the iCal which I don't think I can use as Rainlendar isn't made with it.
