To Do list won\'t set position from edge of screen

Posted by dkump - 2009/04/14 16:27

I have 5 calendars positioned along the right edge of my screen (stacked top to bottom). To the left of my calendars, I have my To Do list. When I attach an external monitor with a different screen resolution, the calendars move correctly to the edge of the screen. However, my to do list in the middle of my screen does not move. It stays in the middle of my screen even though I changed to a wider resolution. I checked that the "keep on screen" setting is set to yes. I also tried changing LinkedScreenEdge in the ini file but it didn't help (it got overwritten the next time I launched Rainlender). Is there a way to get the To Do list to be set based on the screen edge?

At the moment the window needs to touch the screen edge before it is moved when the resolution changes. I'll have to check if it would be possible to move also the windows which are linked to other windows.

Thanks. That's what's happening to me. It would be nice to have settings that let you specify position from screen edge (e.g. -2 from right edge, -5 from top). Then they'd move accordingly as the resolution changes. I can see why you'd want to also specify position from another skin in case they'd change size from one resolution to another.
