
Server based update?

Posted by wea - 2006/12/05 15:06

Hallo!
I've installed rainlendar in a Client/Server environment abt. 3/4 year ago.
Now I tried an update to the current Rainlendar (lite) and it changed in a way I don't find the server options any more :ohmy:
Where do I set the server options in the current release 2.0.1?

Regards,
wea

The old RainlendarServer is not supported anymore. The Pro version supports WebDAV servers which can be used instead of the old custom server.
