
Calendar with photo

Posted by Due - 2010/01/08 11:45

Hello,

I want use im my callendar picture for every month, it was posible in old versions, now I have 2.6 and a use Shadows4.

I have file Months-English.png and in folder skins I have only one file Shadow4-Languages.r2skin-addon.

Where I must put this file if I wont somethink like this:

<http://zapodaj.net/images/e7ac6b200c33.png>

Thanks.

The Shadow skin file is in C:\Program Files\Rainlendar2\Skins\Shadow4.r2skin (or if you've installed an addon there is a newer version of the skin in the data folder). Make a copy of the file, uncompress it (it's a zip file) and replace the Months-English. You also need to change the item positions to make more room for the larger image. See the Rainlendar's help file for more details how to edit the skins.

Do You know where I must change size?

Try first increasing the height of the window and all the y-coordinates of the items and see how it looks then. After you get a hang of it how things are positioned in the skin it should be relatively easy to move things to their correct places.
